DUB ASSISTANT

Full procedures: User Guide · Install: Install Guide

OPERATOR CARD

One page for the desk

BEFORE PLAY

1. MIDI track Dub Assistant holds the device. Not in the audio path.
2. Audio tracks named Drums Bass Vox Keys Guitar FX Perc Other.
3. Return A = Delay. Device writes send A.
4. Click Bind. Want bound 8/8 tracks.
5. Load your CSV, then Train. Or Learn this! at least 8 times first.

TAKE THE MIXER BACK

Drop Dry/Wet to 0. Writes stop. Snapshot is taken again the next time you raise it.

IF NOTHING MOVES

- Dry/Wet is at 0.
- Transport is stopped (faders need play; sends still follow knobs).
- Bind is 0/8. Rename tracks.
- dub-assistant.js is not beside the .amxd.

KNOBS

CONTROL	JOB
col	Colour / wetness. Drives the eight sends.
rhy	How isolated and rhythmic the cuts feel.
dyn	How hard faders jump when they move.
Heart	Scales motion on Drums and Bass only. 0 = they hold.
Dry/Wet	0 = you own the mixer. 100 = full assistant.

BUTTONS

BUTTON	JOB
Learn this!	Save this knob + send/prob/dyn snapshot as a row.
Train	Fit the network. Blocked below 8 rows. Aim for 100+.
Bind	Re-find tracks by name after you rename or reload.
Save / Load	Dataset CSV. Keep it next to the Live Set.
Clear	Wipe the dataset in memory. Does not delete the file.
1/4 / 1/8	Fader grid. Eighths are the default dub feel.

WHILE YOU SET UP

Leave Dry/Wet at 0% while you set up tracks, record, or edit clips. The device writes volume and send A whenever Dry/Wet is up and transport is running.
