SESSION

TEMPLATE SET

The eight-track, two-return Live Set this device expects, including optional stems.

This is the Live Set the device expects. Build it once, then **Collect All and Save** as your starting template (Live manual chapter 5).

Producer Pal can create the tracks, returns, and native Delay / Reverb. It cannot add this Max device, trigger Stem Separation, or write the real-time fader motion.

TRACK LIST

Create the following, in this order if you are starting empty:

Kind	Name	Notes
Audio	Drums	Heart track
Audio	Bass	Heart track
Audio	Vox	
Audio	Keys	
Audio	Guitar	
Audio	FX	
Audio	Perc	
Audio	Other	Spare / others stem
Return	Dub Delay	Native **Delay**. Send A
Return	Dub Verb	Native **Reverb**. Send B
MIDI	Dub Assistant	This device only. No clips required

Turn send A and send B on for every audio track. Leave the MIDI track unrouted to audio.

LOAD THE DEVICE

1. In the Browser, open **User Library → Presets → MIDI Effects → Max MIDI Effect → Dub Assistant**.
2. Drop **Dub Assistant** onto the MIDI track of the same name.
3. Click **Bind** on the device.

OPTIONAL: STEMS

If you have Live 12 Suite:

1. Select a stereo clip.
2. Run **Stem Separation** (chapter 22). Pal cannot start this.
3. Drag Vocals, Drums, Bass, and Other onto Vox, Drums, Bass, and Other.
4. Fill Keys / Guitar / FX / Perc from the rest of the arrangement or leave them empty.

PAL-ONLY HALF

If Pal is connected, ask it to:

1. Create the eight audio tracks and two returns with the names above.
2. Put Delay on Dub Delay and Reverb on Dub Verb.
3. Create the MIDI track Dub Assistant.

You still drop the .amxd yourself. Pal cannot add a User Library Max device in v1 of this project.

COLORS (OPTIONAL)

These colors are only a visual aid. The device does not read them.

Track	Hex
Drums	#FF5A36
Bass	#3D8BFF
Vox	#F2F2F2
Keys	#C9A227
Guitar	#7A5C3C
FX	#9B59B6
Perc	#E67E22
Other	#7F8C8D
Dub Delay	#1ABC9C
Dub Verb	#3498DB
Dub Assistant	#2C3E50
